

Out of the Box Talk

Being an academic researcher in the life sciences can be a highly rewarding occupation, as you can be the one who makes ground-breaking discoveries and solves the challenges of tomorrow. However, for young scientists it comes at a prize: long working days, short term contracts and the willingness for relocation. Given these conditions, how is it possible to continue your career while also starting your family & having kids? We will ask this question to Dr. Chantal Rodgarkia-Dara, **Product Manager of THP medical products and mother of three children.**

After her presentation, there will be a Q&A and a relaxed conclusion with drinks & snacks. If you want to participate, write an E-Mail today, as the number of participants is restricted. Participation is free for ÖGMBT members, but registration is required until 13.03.2018.

Short CV: Dr. Rodgarkia-Dara studied biotechnology at BOKU, did her PhD in cancer genetics at MedUni and was subsequently post-doccing for 5 years after starting at THP in 2010.

When & Where?

15
Mar
2018

7 pm
FH Campus Wien
Studiengang
Molekulare
Biotechnologie
Helmut Qualtinger
Gasse 2; 2nd Floor
1030 Vienna
